Simply put, the Interactive Model takes the Linear Model and multiplies it times two with a quick flip of the return message. It now allows for a feedback element because after a message is encoded and sent to the decoding receiver, the roles then reverse and the receiver encodes and sends a response to the original sender who has now turned receiver.

Three Models of Communication Flashcards | Quizlet

Russian peasant multiplication. The Russian peasant multiplication, also called the Russian peasant algorithm, uses a halving and doubling method to multiply whole numbers. I will illustrate the method with some good examples that you should study carefully.
