For each of the unit step responses shown below, find the transfer function of the system. Solution: (a) This is a first-order system of the form: $G(s) = \frac{K}{s + a}$. Using the graph, we can estimate the time constant as $T = 0.0244$ sec. But, $a = \frac{1}{T} = 40.984$; and DC gain is 2. Thus $K/a = 2$. Hence, $K = 81.967$. Thus, $G(s) = \frac{81.967}{s + 40.984}$

The transfer function defines the relation between the output and the input of a dynamic system, written in complex form (s variable). For a dynamic system with an input $u(t)$ and an output $y(t)$, the transfer function $H(s)$ is the ratio between the complex representation (s variable) of the output $Y(s)$ and input $U(s)$.
